## CHART 1

### Indigenous production of crude oil, NGL and feedstocks by OECD Region

Total OECD production of crude oil, NGL and refinery feedstocks increased by 4.7% in September 2017 compared to September 2016. This was driven by production in the OECD Americas (+5.0% y-o-y<sup>1</sup>). Output grew steadily in the United States and Canada (+9.7% and +6.0% y-o-y respectively), offsetting the decline in Mexican production (-17.8% y-o-y). Canadian production grew year-on-year despite planned maintenance at the Horizon upgrader in September 2017, whilst production fell in Mexico as PEMEX advanced planned maintenance at the Ku-Maloob-Zaap fields.

OECD Europe also saw an increase in production of crude oil, NGL and refinery feedstocks (+5.1% y-o-y). Production grew in the UK (+5.4% y-o-y), as loading of Forties crude increased from the previous month and as production at the Schiehallion field ramps up. Production also grew notably in Norway (+5.1% y-o-y) despite extensive maintenance at a number of fields including the Goliat field.

Overall in the first three quarters of 2017 total OECD production was 1.8% higher than at the same period last year. This has been driven by Canada and the US where so far in 2017 production has been 24 billion metric tons larger than at the same point in 2016 (+4.0% y-t-d<sup>2</sup>)

Total OECD refinery gross output of total products decreased slightly in September 2017 compared to September 2016. Refinery gross output of total products in the OECD Americas dropped by 4.7% year-on-year in September 2017. Many refineries in the US reduced runs or shut down in the aftermath of Hurricane Harvey. Meanwhile in Mexico major refineries, including Salina Cruz, shut down for maintenance after a series of large earthquakes and aftershocks. This decline, however, was offset by the increase in refinery activity in OECD Europe and OECD Asia Oceania. Refinery output increased in these two regions (+5.6% and +2.6% y-o-y respectively) as refineries responded to global demand.

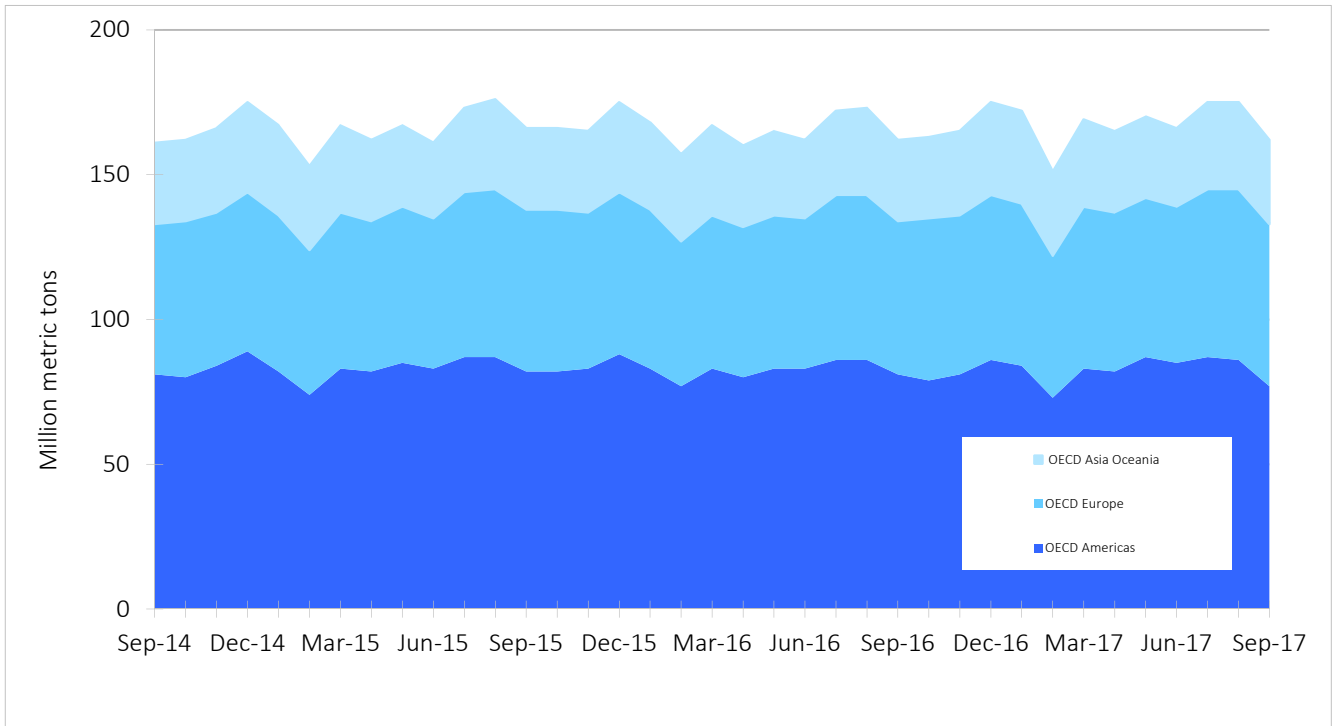

Total OECD stock levels of total oil on national territory were lower in September 2017 against August 2017 across all OECD regions (-6296 thousand metric tons). This was driven by the stock draws of total products across all OECD regions (-4560 thousand metric tons), but particularly in OECD Europe (-2592 thousand metric tons) where the stock draw of middle distillates was particularly significant (-2370 thousand metric tons).

<sup>1</sup> Year-on-year (y-o-y) change over corresponding month of previous year.

<sup>2</sup> Year-to-date (y-t-d) change over corresponding period (beginning of year to current month) of previous year.

## NOTES

Please note that all IEA data are subject to the following Terms and Conditions found on the IEA's website:  
<http://www.iea.org/t&c/termsandconditions/>

### 1) ESTIMATED DATA

Due to the absence of official data, the following data have been estimated:

Sweden	September 2017
Israel	January 2010 to September 2017

### 2) COUNTRY NOTES

Australia	Starting from January 2017 gas/diesel oil and motor gasoline closing stock data reflect the inclusion of new companies in the Australian data collection system.
Austria	Most recent data are the best estimates from the Austrian national administration, based on available preliminary data. Data are usually finalised within three months following the first publication.
Canada	Data for Canada are submitted by the Department of Natural Resources (Natural Resources Canada, or NRCan), based on actual and preliminary data from Canada's national statistical agency (Statistics Canada) and various other sources. In cases where data from these sources are unavailable, estimates are conducted by NRCan, based on information available at the time, including alternative sources. Data are usually finalised within three months of the first publication. An important source for any differences between data published by Statistics Canada and data published by the IEA is data estimated by NRCan or the IEA Secretariat.  There is a break in series between December 2015 and January 2016 data as the Canadian Administration is using a new methodology from January 2016 data onwards. Under the new methodology crude oil includes condensates and pentanes plus for all flows and motor gasoline imports are better accounted for. Furthermore, reporting has been improved with an appropriate use of the flow recycled products. Revisions to historical data are pending.
France	Following a methodological change in the French statistics coverage, data from January 2017 includes the overseas departments (French Guiana, Guadeloupe, Martinique, Mayotte and Reunion).
Iceland	There is no natural gas data for Iceland, as there is neither production nor consumption.
Ireland	As of April 2017 there is no gas stored in Ireland. Stock figures for April-May 2017 refer to line pack gas.
Israel	Petroleum coke is included by Israeli Administration in the amounts of other petroleum products. The stocks level information is not available at this time. Revisions are pending. The trade breakdown information is not available at this time. Information is based on data published by the Ministry of Energy and Water Resources as well as the Central Bureau of Statistics. The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law.
Netherlands	As of December 2016, large amounts of fuel oil are reported under other products due to their chemical properties.
Sweden	In January 2017 Statistics Sweden added more companies to their new data collection system, causing a stock break between December 2016 and January 2017.
Turkey	The Turkish Administration changed its methodology of reporting marine diesel. As of January 2013, amounts of marine diesel are included under fuel oil. Prior to that month, these amounts were included under gas/diesel.

## NOTES

United States    Following a methodological change in the US Energy Information Administration (EIA) reporting, industry stocks of crude oil for the United States exclude crude oil lease stocks (crude oil stocks held at producing sites) beginning with data for January 2005.
