## CHART 1

### Indigenous production of crude oil, NGL and feedstocks by OECD Region

Total OECD production of crude oil, NGL and refinery feedstocks remained largely unchanged in the first five months of the year compared to the same period of 2016 (+0.1% y-t-d<sup>1</sup>). However on a year-on-year<sup>2</sup> basis production grew by 5.0%, driven by higher production in the OECD Americas, where both the United States and Canada showed strong growth (+2.4% and +26.3% y-o-y respectively). Canadian production increased year-on-year despite the outage at the Mildred Lake oil sands facility where output only returned to normal levels towards the end of June. It should also be noted that Canadian production in May 2016 was affected by the wildfires at Fort McMurray, Alberta.

Total OECD refinery gross output of total products also increased in May 2017 compared to May 2016 (+3.3% y-o-y). Refinery gross output increased both in the OECD Americas and OECD Europe (+4.7% and +4.0% y-o-y respectively) driven in both cases by refinery gross output of gas/diesel oil.

Total OECD net deliveries of total products grew by 4.2% in May 2017 compared to May of last year. Growth was reported across all OECD regions, and in particular the OECD Americas (+4.8% y-o-y) and OECD Europe (+4.3% y-o-y). Net deliveries grew in OECD Asia Oceania too, as year on year growth in the deliveries of naphtha and gas/diesel oil (+8.4% and +7.6% y-o-y respectively) offset the decrease in residual fuel oil and other products (-26.1% and -10.3% y-o-y respectively).

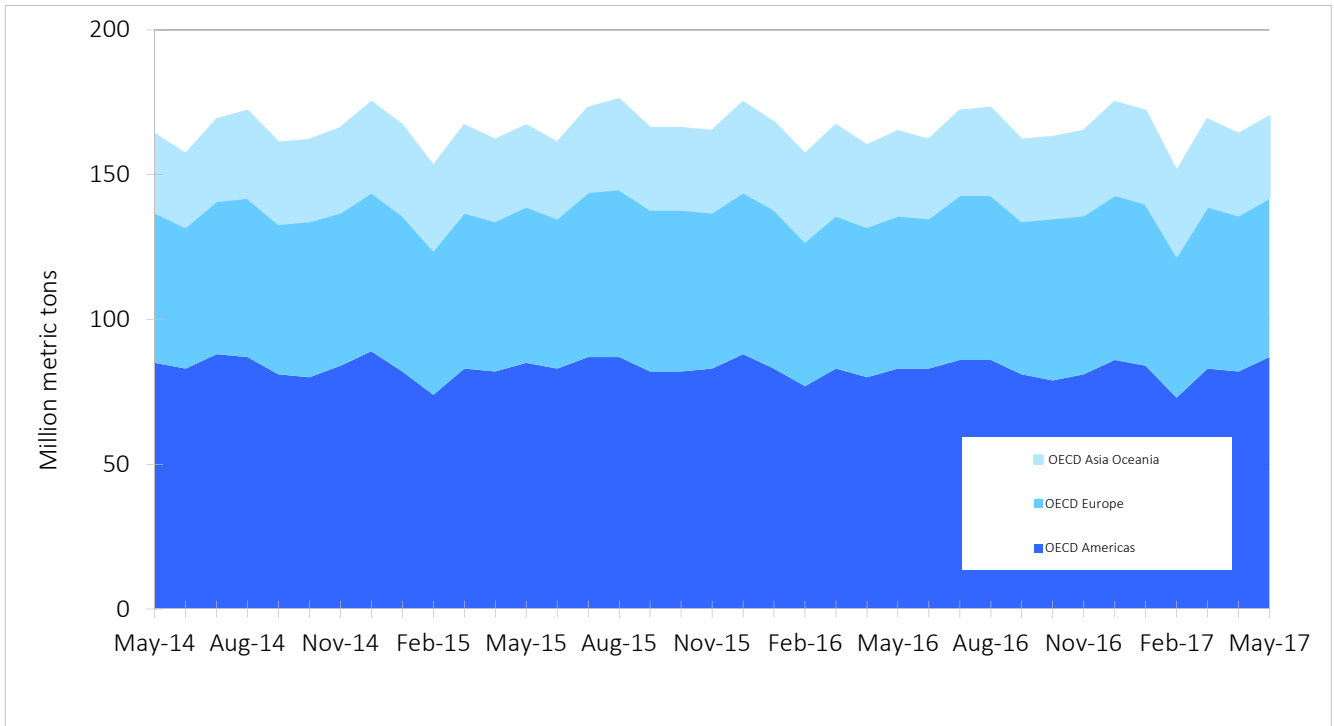

Total OECD stock levels of total oil on national territory decreased slightly in May 2017 when compared to closing stock levels in May 2016 and stood at 563 million metric tons. However total OECD stocks of total oil dropped by 3145kt during May 2017. This was driven by a stock draw of primary products across the OECD Americas (-725kt) and OECD Asia Oceania (-1003kt) and of total products in OECD Europe (-3425kt).

1 Year-to-date (y-t-d) change over corresponding period (beginning of year to current month) of previous year.

2 Year-on-year (y-o-y) change over corresponding month of previous year.

## NOTES

Please note that all IEA data are subject to the following Terms and Conditions found on the IEA's website:  
<http://www.iea.org/t&c/termsandconditions/>

### 1) ESTIMATED DATA

Due to the absence of official data, the following data have been estimated:

Israel January 2010 to May 2017

### 2) COUNTRY NOTES

Australia	Starting from January 2017 gas/diesel oil and motor gasoline closing stock data reflect the inclusion of new companies in the Australian data collection system.
Austria	Most recent data are the best estimates from the Austrian national administration, based on available preliminary data. Data are usually finalised within three months following the first publication.
Canada	There is a break in series between December 2015 and January 2016 data as the Canadian Administration is using a new methodology from January 2016 data onwards. Under the new methodology crude oil includes condensates and pentanes plus for all flows and motor gasoline imports are better accounted for. Furthermore, reporting has been improved with an appropriate use of the flow "recycled products". Revisions to historical data are pending. Data for Canada are submitted by the Department of Natural Resources (Natural Resources Canada, or NRCan), based on actual and preliminary data from Canada's national statistical agency (Statistics Canada) and various other sources. In cases where data from these sources are unavailable, estimates are conducted by NRCan, based on information available at the time, including alternative sources. Data are usually finalised within three months of the first publication. An important source for any differences between data published by Statistics Canada and data published by the IEA is data estimated by NRCan or the IEA Secretariat.
France	Following a methodological change in the French statistics coverage, data from January 2017 includes the overseas departments (French Guiana, Guadeloupe, Martinique, Mayotte and Reunion).
Israel	The statistical data for Israel are supplied by and under the responsibility of the relevant Israeli authorities. The use of such data by the OECD is without prejudice to the status of the Golan Heights, East Jerusalem and Israeli settlements in the West Bank under the terms of international law. The trade breakdown information is not available at this time. The stocks level information is not available at this time. Revisions are pending. Petroleum coke is included by Israeli Administration in the amounts of other petroleum products. Information is based on data published by the Ministry of Energy and Water Resources as well as the Central Bureau of Statistics.
Netherlands	As of December 2016, large amounts of fuel oil are reported under other products due to their chemical properties.
Sweden	In January 2017 Statistics Sweden added more companies to their new data collection system, causing a stock break between December 2016 and January 2017.
Turkey	The Turkish Administration changed its methodology of reporting marine diesel. As of January 2013, amounts of marine diesel are included under fuel oil. Prior to that month, these amounts were included under gas/diesel.

## NOTES

United States    Following a methodological change in the US Energy Information Administration (EIA) reporting, industry stocks of crude oil for the United States exclude crude oil lease stocks (crude oil stocks held at producing sites) beginning with data for January 2005.
